4. Using Windows Certificate Store

In Windows, `.p12` files are sometimes used to import certificates into the system's Certificate Store. To view the certificate in the Windows Certificate Manager:

1. Double-click the `.p12` file in Windows Explorer.
2. The **Certificate Import Wizard** will appear.
3. Choose to import it into the **Personal** store.
4. After importing, you can view the certificate in the **Certificate Manager** by typing `certmgr.msc` in the Start menu and navigating to **Personal** > **Certificates**.
